

With `new_paragraph` we can start a paragraph. With `add_text` we can add text to the paragraph. As described in the example file `e01_paragraph.py`.

With `new_paragraph` we can start a second paragraph. With `add_text` we can add text to the second paragraph just as we did with the first paragraph.

(As this example does not have a heading the generated markdown file will not have a heading. If `markdownlint` is used on the generated markdown file it will report an error for the missing heading.)
