

Table row by row with bold & italic example

City	Country	Size
Mariehamn	Finland	Small
<i>Copenhagen</i>	<i>Denmark</i>	<i>Large</i>
Tokyo	Japan	Huge

Capital	Country	Continent
Oslo	Norway	Europe
Tokyo	Japan	Asia
Berlin	Germany	Europe
Kairo	Egypt	Africa
Brussels	Belgium	Europe

Note: As the rows are added and written one by one, the library cannot know the width of columns in future rows, this will make markdown formatted output look a bit odd when reading the markdown file, however any further formatting from markdown will hide this and make the table look as expected.
