

URL in paragraph example

This is a paragraph with a URL: [The examples are here.](#)

The URL was added as a link using `add_url(text, url)`

By not specifying the text, the URL is shown as text:

<https://bitbucket.org/tom-bjorkholm/mformat/src/master/example>

A paragraph can of course have multiple URLs. [The source code of the examples are here.](#) and [The produced output files are here.](#)
