

Block Quote Example

Block quotes are used to highlight quoted text or to draw attention to important information.

Simple Block Quote

This is a simple block quote. Block quotes are visually distinguished from regular text with indentation and/or styling depending on the output format.

Block Quote with Formatting

Block quotes can have **bold** and *italic* text just like paragraphs.

Block Quote with URL

For more information, visit [Example Website](#) for details.

Block Quote with Code

The function `new_block_quote()` starts a new block quote, and `add_text()` adds more text to it.

Block quotes cannot be nested. Starting a new block quote while inside one ends the current quote and starts a fresh one.
